

DESIGNS FOR THE WORLD[®]

Designs for the World LLC began as an endeavor to create an innovation to help the smallest and newest members of humanity. *More than three newborn babies die every minute because they cannot be kept warm.* After twenty-one months of development, the proof-of-concept for the **Tikü[®]** neonatal incubator was completed to help these at-risk infants. The device is safe, simple, inexpensive, and operates anywhere in the world without electricity. We self-fund our humanitarian research-and-development. When we have produced a number of the incubators for field evaluation, we intend to partner with non-profit organizations to sponsor the introduction of the device to birthing clinics in Sub-Saharan Africa.

Many people have an idea for a product but do not know to how move from imagination to creation. Individuals and corporations are reaching out to us. Over the last year, we have undertaken projects for medical, hospitality, construction, automotive, electronics aftermarket, and entertainment industries. *We help with concept development, 3D digital modeling, and production of a physical prototypes.* We guide and assist inventors in acquiring intellectual property protection. We work with makers by providing help with market research, locating investors, and investigating production facilities.

We have been working collaboratively with partner companies to create makerspaces in local educational, technical, and career institutions. *We teach design and 3D digital fabrication technologies to students and technicians to bolster local manufacturing through technical and artistic innovation.* Our work will help create current and future jobs for our community.

If you like what we do, bring us your project and introduce your idea to the world.
